## **AN ELECTRONICS TECHNICIAN ROLE THAT'S SO NERDY IT'S ACTUALLY COOL**

Are you an electronics technician and just love electronics?

Yes?

Then come and talk to us.

**Be part of a great team building high-tech export products.**

**Enjoy a fun, professional and pleasant work environment.**

Let me introduce ourselves. We're Elexon. We're an innovation company. We develop and manufacture high-tech stuff that's exported all over the world. We seem to be pretty good at it, which is probably why we really enjoy what we do.

We have another electronics technician role to fill. This role is so nerdy that it's actually cool at the same time, especially if you love electronics as much as we do. If you thought that nerdy and cool were opposites, then you haven't been to Elexon yet. You will need to not only fix electronic circuit boards but also figure out how to fix the manufacturing process so that all of the new boards work first time, every time. The second bit is important, because if we keep making things that don't work and just keep on fixing them, it's not going to end well.

The job involves:

- Fault-finding and fixing complex electronic circuit boards and then working out how to make them better the next time (hopefully you'll get us to point where 100.00% of products work first time);
- Fault-finding and fixing warranty claims (in particular figuring out why we stuffed up and how to make sure we never, ever, do that again); and
- Helping production make other things (our production staff are great, but they're not technicians and some of the test equipment has an awful lot of knobs).

Required skills, experience and qualifications:

- You must be great at fault finding and fixing electronics (sorry,

ELEXON ELECTRONICS Pty Ltd

6-253 Leitchs Road

just being nerdy isn't enough), and for clarity, we're talking about fixing the electronics at component level, not swapping a broken board for a new one or fixing a broken wire;

- Formal qualifications as an electronics technician, although, if don't have the bits of paper but you do have a mountain of experience and are nothing short of awesome at electronics, please apply anyway (we'll figure out pretty quickly whether you know what you're doing);
- Hands-on experience with manual assembly and soldering of very small Surface Mount Technology (SMT) components Devices (a pair of those black-rimmed glasses would be perfect);
- A consistent, positive attitude; and
- A willingness to follow process and to help develop process.

Desirable experience:

- Experience with Lean Manufacturing techniques.

If your electronics experience is limited to replacing circuit boards or finding bad connections, there are plenty of other roles for you to apply for.

Does this sound like a job for you?

Location: Brendale, Brisbane, Queensland.

**Please send your application to:**

Elexon Holdings Pty Ltd is owned by two discretionary trusts: Bateman Trust #3 and The Kuiper Trust.

Elexon Holdings is a holding company that owns two subsidiaries: Elexon Electronics Pty Ltd and Mindspark Technologies Pty Ltd. Elexon Electronics conducts trade with the outside world, whereas Mindspark owns the group's assets including equipment and Intellectual Property.

Elexon Holdings was formed in Jan 2006, when it purchased the expertise and know-how of IEDEC Pty Ltd. IEDEC operated very successfully for over 12 years before the transition to Elexon. All IEDEC staff transitioned to Elexon.

Regards
